CHAPTER 1 INTRODUCTION

Directive 64/432/EEC of 26 June 1964 on animal health problems affecting intra-Community trade in bovine animals and swine¹ provides that a Member State or part of a Member State may be declared officially tuberculosis-free, officially brucellosis-free and officially enzootic-bovine-leukosis-free as regards bovine herds, subject to compliance with certain conditions set out in that Directive.

The lists of regions of Member States declared officially free of bovine tuberculosis, bovine brucellosis and enzootic-bovine-leukosis are set out in Commission Decision 2003/467/EC of 23 June 2003 establishing the official tuberculosis, brucellosis and enzootic-bovine-leukosis-free status of certain Member States and regions of Member States as regards bovine herds².

Article 9 of Directive 64/432/EEC provides that a Member State, which has a compulsory national control programme for one of the contagious diseases listed in Annex E(II) to that Directive, may submit its programme to the Commission for approval. That Article also provides for the definition of the additional guarantees which may be required for trade within the Union.

In addition, Article 10 of Directive 64/432/EEC provides that where a Member State considers that its territory or part thereof is free from one of the diseases listed in Annex E(II) to that Directive, it is to present appropriate supporting documentation to the Commission. That Article also provides for the definition of the additional guarantees which may be required for trade within the Union.

Commission Decision 2004/558/EC of 15 July 2004 implementing Council Directive 64/432/EEC as regards additional guarantees for intra-Community trade in bovine animals relating to infectious bovine rhinotracheitis and the approval of the eradication programmes presented by certain Member States³ approves the programmes for the control and eradication of the infection with the bovine herpesvirus type 1 ('BHV1') presented by the Member States listed in Annex I to that Decision for the regions listed in that Annex, and for which additional guarantees for BHV1 apply in accordance with Article 9 of Directive 64/432/EEC. In addition, Annex II to Decision 2004/558/EC lists the regions of the Member States that are considered free of BHV1 infection and for which additional guarantees apply in accordance with Article 10 of Directive 64/432/EEC.

Commission Decision 2008/185/EC of 21 February 2008 on additional guarantees in intra-Community trade of pigs relating to Aujeszky's disease and criteria to provide information on this disease⁴ contains a list of Member States or regions thereof free of Aujeszky's disease and where vaccination is prohibited in Annex I thereto. Annex II to Decision 2008/185/EC contains a list of Member States or regions thereof where disease control programme for that disease are in place.

The information in Chapter 2 of this Report provides an overview of the status of EU Member States, Norway and Switzerland and regions thereof recognised as officially free from the abovementioned animal diseases at **31/12/2013**.

³ OJ L 249, 23.7.2004, p. 20.

⁴ OJ L 59, 4.3.2008, p. 19.

In accordance with Article 8 of Directive 64/432/EEC, Member States are requested to forward to the Commission, by 31st May each year, details of the occurrence of diseases listed in Annex E(I) to the Directive and of any other diseases covered by the additional guarantees provided for by Union legislation in its territory referred to the year 2013.

On the basis of this Article, Commission Decision 2003/886/EC of 10 December 2003⁵ laid down the format on which this information must be based. Member States should provide the whole required report. However, those Member States which had an approved co-financed programme for a disease (in the reporting period) or those not free of BHV1 infection or without approved programme for the control and eradication of the infection with BHV1 in place do not have to include information on those diseases and on BHV1 infection.

The information in Chapter 3 of this Report presents a summary of the details of the occurrence of diseases listed in Annex E(I) to Directive 64/432/EEC and of any other diseases covered by the additional guarantees provided for by Union legislation and of monitoring or eradication programme (not covered by Decision 2008/940/EC⁶) provided by the Member States for the year 2013.

In addition, within the framework of the Agreement on the European Economic Area⁷ and the Agreement between the European Community and the Swiss Confederation on trade in Agricultural Products⁸ also Norway and Switzerland provide the abovementioned details which are incorporated in this Report.

BE: *One breakdown herd was detected by serological follow-up surveillance during the winterscreening of contact herds of the 2012 breakdown herds. Six bovines of this “contact” herd of the primary breakdown of 2012 were infected with *Brucella abortus* biovar 3. No other infected animal or herd was detected in the 67 “contact” herds of this 2013 breakdown.

CY: *Total number of existing bovine herds under the programme are 306.

DK: *Bulls at semen collection centres are subjects to serological test for bovine brucellosis before entry to the centres and once a year. Furthermore, some bovine animals are tested before export. In 2013, 20 abortions were tested for brucellosis. Non were due to suspicion and all tested negative

EE: *total number of herds tested (as in many cases from the same herd both serological and bulk milk samples are taken).

ES: *only Autonomous Region of the Canary Islands, Autonomous Community of the Balearic Islands, Autonomous Community of Pais Vasco, Autonomous Community of Murcia, and Autonomous Community of La Rioja; other regions: 2008/940/EC

FI: *Abortions in cattle are as such not notifiable in Finland, if there is no reason to suspect a notifiable disease. The number indicates the number of abortions, from which samples were submitted to the laboratory on a voluntary basis to clarify the reason for the abortion, and where a *Brucella*-examination was carried out among other examinations.

BE: Surveillance carried out at random selection of bovine herds and bovine animals. No suspected tumours were detected and sent for laboratory examination in 2013.

CY: *Total number of existing bovine herds under the programme are 296.

EE: *total number of herds tested (as in many cases from the same herd both serological and bulk milk samples are taken).

FI: *14% of all dairy herds (total number of dairy herds was 9,120) were screened for EBL by using bulk milk samples. In addition 864 blood samples from A.I. bulls and their herds of origin were tested with negative results in 2013.

HR: *the total number of EBL officially free herds at the end of 2013 was 991. The eradication and monitoring programme in Croatia consists of serological testing of all breeding animals over 24 months of age. The first test was conducted in Autumn 2013 and the second testing has been conducted from March to April 2014.

⁽¹⁾ Programme under the supervision of the competent authority.

⁽²⁾ Pig holdings where serological tests for AD have been carried out with negative results in accordance with an official AD programme and where vaccination has been applied during the previous 12 months.

⁽³⁾ Pig holdings which fulfil the conditions of Article 1(c).

⁽⁴⁾ By means of clinical, serological, or virological investigations.

AT: By Decision 97/423/EC of 30 June 1997 Austria was granted additional guarantees in accordance with Article 10 of Directive 64/432/EEC. Therefore, since June 1997 Austria has been recognised as an Aujeszky's disease-free Member State. In order to maintain that status a yearly monitoring programme is carried out. Moreover, in Austria vaccination is forbidden. In addition, in 2013, 12,801 pigs in 4,323 herds were tested. No positive result was found. Since 1997 and also in 2013 Austria has been free of Aujeszky's disease. In the 6 semen collection centres, 1,521 pigs have tested with negative results.

BE: In total 160,610 sera of pigs in holdings and artificial insemination centers were analyzed for Aujeszky Disease. All results were negative.

CY: In 2013, 677 blood samples were tested from 36 pig holdings. These figures were randomly chosen based on a 5% prevalence among holdings and confidence interval of 95%.

DK: In the serological surveillance 39,374 blood samples have been tested (slaughter, export, semen collection centres).

FI: Further information on serological monitoring:

- 1) Annual monitoring from samples collected from slaughterhouse: The total number of samples collected was 1053, all of them were analysed for AD, TGE, CSF, ASF and PRRS, all with negative results.
- 2) Artificial insemination activities: The total number of samples collected was 1238, all of them were analysed for AD, all with negative results. Samples were also analysed for other diseases as follows: 1014 for CSF, 907 for TGE, and 1238 for PRRS, all with negative results.
- 3) Finnish SPF (specific pathogen free) herds: 986 samples were collected. 507 samples were analysed for TGE and 986 for PRRS, all with negative results.
- 4) Altogether 2079 samples from AI activities and SPF herds were analysed for Brucella suis, all with negative results.
- 5) Wild boars: The total number of samples collected from wild boars was 9. All these samples were analysed for AD, CSF and ASF, all with negative results.

IE *vaccination prohibited on all holdings

IT Province of Bolzano only

NL: The breeding pig holdings (238) have to test 12 blood samples every month. The other pig holdings (6,741) have to test 3 blood samples every 4 months. In total 100,233 blood samples were taken and serological monitored by a gB-test in 2013. All the pig holdings sampled were negative.

SE: In accordance with the Swedish surveillance programme for AD, 1,518 serological tests in 506 holdings were analysed in 2013.

SI: The Republic of Slovenia was recognised as an Aujeszky's disease free Member State by Commission Decision 2010/434/EC and included in Annex I to Commission Decision 2008/185/EC.

In the frame of monitoring programme for maintaining Aujeszky's disease free status, 4,272 animals were tested in 746 herds.

Herd based sampling scheme is designed to detect a 1% level of sero-positive herds with 95% confidence (149 pig herds), and detection of within-herd prevalence of 5% with 95% confidence in breeding and mixed herds, combined with risk based components (purchased breeding pigs; pigs with health problems). In addition to this, all boars are tested for Aujeszky's disease as well.

UK *Data including NI (1,140 free holdings for NI, 10,238 for GB).

3.8.2 EU Member States or regions thereof where approved Aujeszky's disease control programmes are in place.

HU: *out of which 737 are large pig holdings and 28,361 are small pig holdings. In Hungary in the reporting period there were 10 porcine semen collection centres where 557 serological tests for Aujeszky's disease have been carried out, in each case with negative results.

PL: *During 2013 on the territory of Poland were 253 pig herds with a positive serological result for Aujeszky's disease, including 188 new positive herds. 143 herds were eliminated, which gives 110 herds with a positive serological result for Aujeszky's disease at the end of 2013.

Total number of non-infected herds on the territory of Poland at the end of 2013 was 269,897 herds, including:

- 1) 257,355 herds complying with the criteria of Article 1(3) of Decision 2008/185/EC,
- 2) 12,542 herds obtained negative results in the last serological tests for Aujeszky's disease carried out within the framework of national programme for eradication of Aujeszky's disease, introduced by Regulation of the Council of Ministers of 6 December 2012 *on introduction of programme for eradication of Aujeszky's disease in pigs* [Dz. U. of 2012, No 1440].

The remaining herds are: infected herds (10), suspended herds (113) and herds with unknown epizootical status (101,314). Amongst the latter, around 100 % were so called "empty herds", i.e. herds qualified for the programme based on central database on animal identification and registration in which no animals were kept at the visit of the official veterinarian.

BG: In the table above are not included backyard holdings.

EE: Number of Aujeszky's disease free holdings, which are not officially free of Aujeszky's disease accordance with Article 1(3) of Commission Decision 2008/185/EC and vaccination is prohibited.

Due to the favourable situation of Aujeszky's disease, the amount of testing was reduced for the year 2013. 113 samples which were taken from 7 herds were taken for export purpose. All collected samples were negative.

GR No outbreaks of Aujeszky's disease reported in 2013. No national eradication and monitoring programme in place.

HR The Aujeszky's disease control and eradication program was implemented from 31 November 2013 to 31 December 2013. All AD positive pigs are slaughtered under the approved eradication plan for the infected farm.

LT: Total number of pigs in the country: 514,031 out of which 565 breeding pigs were tested for Aujeszky's disease in 2013.

LV: According to "Animal infectious disease State surveillance plan for 2013" laboratory tests (serology – ELISA) for Aujeszky's disease are carried out in all semen collection centers on all donor boars once per year. Vaccination is carried out on holdings where positive serological results are found. 21,632 pigs were vaccinated during 2013 in 40 holdings. 10,418 animals in 110 holdings were tested for Aujeszky's disease during 2013.
